GitHub: **Azure Infrastructure with Terraform** | Scalable Azure Infra with Terraform
GitHub: **CloudOps Goal Tracker - Three-Tier Architecture** | Production Grade Three Tier Application

Professional Summary:

Results-driven DevOps Engineer with around 4 years of experience in automating, optimizing, and managing cloud infrastructures and CI/CD pipelines, proficient in Azure services such as AKS, Virtual Machines, App Services, Functions, API Management, Storage, SQL Database, and Cosmos DB, with expertise in Infrastructure as Code (Terraform, ARM, Bicep, and emerging tools like Crossplane and Pulumi), CI/CD automation (Azure DevOps, GitHub Actions, Jenkins), and containerization (Docker, Kubernetes, Helm), along with hands-on experience in GitOps practices using ArgoCD for declarative deployments; skilled in event-driven architecture leveraging Apache Kafka, and Kubernetes security using tools such as Trivy, Falco, OPA/Gatekeeper, Cilium, and cert-manager, with strong capabilities in security (RBAC, Azure AD, Key Vault, Defender for Cloud), monitoring (Azure Monitor, Log Analytics, Prometheus, Grafana), and cost optimization, leveraging PowerShell, Bash, and Python to drive efficiency, scalability, and cloud-native innovations.

Key Skills:

- **Cloud Platforms**: Microsoft Azure (VMs, AKS, ACR, Azure Functions, Logic Apps, APIM, Storage, Networking), AWS (EC2, S3, ECS, EKS, Auto Scaling, ELB, VPC, EventBridge, IAM, CloudWatch)
- **IaC & Provisioning**: Terraform, ARM Templates, Bicep, Crossplane, Pulumi
- **CI/CD & Automation**: Azure DevOps Pipelines, GitHub Actions, Jenkins
- **Containers & Orchestration**: Docker, Kubernetes (AKS/EKS), Helm, ArgoCD (GitOps)
- **Kubernetes Security**: Trivy, Falco, OPA/Gatekeeper, Cilium, cert-manager
- **Security & Compliance**: Azure AD, Key Vault, IAM, RBAC, Defender for Cloud, Security Center, SonarQube, SAST/DAST
- **Monitoring & Logging**: Azure Monitor, Log Analytics, Application Insights, Prometheus, Grafana
- **Event-Driven Architecture**: Apache Kafka
- **Networking & Infrastructure**: Virtual Networks, Load Balancers, Firewalls, DNS, ExpressRoute
- **Scripting & Programming**: PowerShell, Bash, Python, YAML, JSON
- **Databases**: Azure SQL, MySQL, PostgreSQL, Redis Cache, Cosmos DB
- **Version Control & SCM**: Git, GitHub, Azure Repos, Bitbucket
- **Methodologies**: Agile/Scrum, DevSecOps

Certifications:

- **CKA:** Certified Kubernetes Administrator
- **CKAD**: Certified Kubernetes Application Developer
- **KCNA**: Kubernetes and Cloud Native Associate
- **Hashi Corp Certified**: Terraform Associate (003)
- **Microsoft Certified**: Azure DevOps Engineer Expert (AZ-400)
- **Microsoft Certified**: Azure Administrator Associate (AZ-104)

Project Summary:

1. Automated Multi-Cloud CI/CD Pipeline and Kubernetes Orchestration

- Built automated CI/CD pipelines using Azure DevOps, GitHub Actions, and Jenkins for deploying microservices to Azure AKS and AWS EKS
- Provisioned infrastructure with Terraform and ARM Templates, ensuring consistent multi-cloud environments
- Containerized applications with Docker and deployed using Helm charts for scalable, zero-downtime releases
- Implemented security with Azure AD RBAC, Key Vault, and integrated Defender for Cloud and SonarQube into pipelines
- Created monitoring dashboards using Azure Monitor, Prometheus, and Grafana for proactive issue detection
- Automated scaling, disaster recovery, and cost optimization via Azure Scale Sets, Site Recovery, and Cost Management
- Collaborated with Agile teams to embed DevSecOps practices and mentored junior engineers

Professional Experience:

DevOps Engineer **Technology Solutions, Canada** **Sep 2024 – Till Date**

- Implemented and managed GitOps-based continuous delivery workflows using ArgoCD, ensuring consistent, automated, and auditable Kubernetes deployments across multiple environments.
- Designed, deployed, and maintained containerized applications using Docker and Kubernetes on managed platforms such as AWS EKS and Azure AKS.
- Developed and maintained Helm charts to standardize, version, and streamline application deployments.
- Built and supported event-driven microservices architectures using Apache Kafka, improving system scalability and enabling asynchronous communication.
- Automated infrastructure provisioning and configuration using Terraform, while expanding Infrastructure as Code capabilities through Crossplane and Pulumi for Kubernetes-native resource management.
- Established secure and scalable CI/CD pipelines aligned with DevOps and GitOps best practices.
- Strengthened Kubernetes security by integrating Trivy for vulnerability scanning, Falco for runtime threat detection, and OPA/Gatekeeper for policy enforcement and governance.
- Automated TLS certificate lifecycle management using cert-manager, ensuring secure service communication across clusters.
- Enforced security best practices including image scanning, least-privilege access, and compliance with organizational and regulatory standards.
- Collaborated with development, QA, and security teams to improve deployment reliability, platform stability, and operational efficiency.
- Monitored and troubleshot production systems, ensuring high availability, performance optimization, and rapid incident resolution.
- Contributed to platform engineering initiatives by building reusable modules, templates, and self-service capabilities for development teams.

DevOps Developer – Cloud **Tatva Soft, India** **Jan 2021 – Sep 2023**

- Designed, built, and managed robust CI/CD pipelines using Azure DevOps, GitHub Actions, and Jenkins to deliver automated, reliable, and scalable deployments, significantly accelerating software delivery timelines.
- Expertly managed cloud infrastructure provisioning with Terraform, ARM Templates, and Bicep, enhancing efficiency,

consistency, and reducing manual intervention.

- Configured and optimized Azure Kubernetes Service (AKS) clusters for deploying and managing microservices architectures with Helm charts, ensuring high availability, seamless scalability, and minimal downtime.
- Developed infrastructure automation scripts using PowerShell, Bash, and Python to streamline operations, increase efficiency, and minimize operational disruptions.
- Implemented strategic Git branching and version control best practices using Git, Azure Repos, and GitHub, maintaining highly organized and efficient repositories.
- Enhanced cloud security through meticulous implementation of RBAC policies, Azure AD authentication, Key Vault secrets management, and Defender for Cloud, ensuring rigorous compliance and data protection standards.
- Optimized real-time system monitoring, logging, and alerting solutions with Azure Monitor, Log Analytics, and Application Insights, proactively identifying issues and guaranteeing system performance and reliability.
- Engineered Docker containerization strategies and orchestrated Kubernetes deployments, significantly improving application scalability, portability, and performance across various cloud environments.
- Automated critical infrastructure scaling and disaster recovery procedures using Azure Scale Sets, Load Balancers, and Azure Backup, ensuring uninterrupted business continuity and resilience.
- Collaborated closely with cross-functional teams—including developers, security engineers, and operations specialists—to implement robust DevSecOps practices, enhancing overall software delivery security and efficiency.
- Conducted proactive performance tuning, incident management, and troubleshooting for Azure-hosted applications, significantly reducing downtime and boosting system efficiency and responsiveness.
- Managed cloud expenses effectively by analysing Azure Cost Management reports, implementing auto-scaling strategies, and resource right-sizing, achieving notable reductions in operational costs.
- Ensured strict compliance with industry and regulatory standards by integrating leading-edge security solutions such as SonarQube, SAST/DAST, and advanced security scanning tools into the CI/CD pipelines.
- Architected comprehensive disaster recovery (DR) and high availability (HA) solutions leveraging Azure Site Recovery, Backup, and Availability Zones, guaranteeing robust business continuity and rapid recovery capabilities.
- Mentored and led junior DevOps engineers, providing hands-on training in Azure DevOps, Terraform, Kubernetes, and best practices in CI/CD, cultivating an environment of continuous learning, innovation, and professional growth.

Education:

- **Post-Graduate** in Mobile Solutions Development, Canada **May 2023 – Aug 2024**
- **Bachelor's** Degree in Computer Science & Engineering, India **May 2017 – Aug 2021**
